1. Introduction

The Kyoto is one of three (3) high rise apartment buildings making up the Birchwood Towers. All together the three towers house a total of 798 one, two and three bedroom apartments. The CHP system being installed includes one 75-kW Aegen TP-75LE provided by Aegis Energy Services Inc. The Aegen unit includes a natural gas fired reciprocating engine, a 480 VAC induction generator, and a jacket water and exhaust heat recovery system all installed in a sound attenuating enclosure. The system includes the protective relay built into the panel. The unit is capable of providing 523 MBtu/h of thermal output in the form of hot water, and serves the facilities DHW, space heating loads. The system does include a dump radiator.

2. Monitoring System

A monitoring system will be installed to measure the performance of the CHP system. The system will be based around an Obvius AquiSuite data logger. Aegis is installing the majority of the metering and contracted CDH Energy to provide and install the monitoring system. The cogen unit, controls, metering equipment, and data logger will all be located in the facilities 2nd cellar boiler room. The monitored points recommended to quantify performance are listed in Table 1.

Table 1. Monitored Data Points

No.	Input	Data Point	Description	Units	Sensor
1	MB-001	WT	Total Facility Power	kW/kWh	Veris E50 C2 with MV Rope CTs
2	MB-002	WG	Gross Generator Power	kW/kWh	Veris H8035-0300-3
3	MB-003	WPAR	Parasitic Power	kW/kWh	Veris H8035-0100-2
4	IN1	FG	Generator Gas Use	CF	Utility pulse output from billing meter
5	IN2	THW1	Supply Temperature from Cogen Unit	deg F	Veris TID B1 D0 10k Type II thermisor
6	MB-004	QU_METER	Useful Heat Recovery - BTU Meter Calculated	Mbtu/h	Badger 380 BTU meter
7	MB-004	THW2	Temperature Between Useful HXs and Dump HX	deg F	
8	MB-004	THW3	Return Temperature from Cogen Unit	deg F	
9	MB-004	FHW	Flowrate CHP Loop	GPM	
10	-	QU	Useful Heat Recovery	Mbtu/h	Calculated Point
11	-	QD	Rejected Heat Recovery	Mbtu/h	Calculated Point
12	-	TAO	Ambient Temperature	deg F	Weather Underground

The rejected heat recovery from the system **(QR)** is calculated by the temperature and flow measurements provided by the BTU Meter **(FHW, THW2, and THW3)**. The temperature sensors for the BTU Meter are being installed before and after the dump radiator HX. The useful heat recovery (space heating, DHW, and pool heating) can be calculated using one of the BTU meters temperature sensors, the BTU meter flow, and the additional temperature sensor (**FHW, THW1, and THW2)**.

The generator gross power output **(WT)** will be measured inside the 208 V panel located on the opposite side of the boiler room of the cogen unit. The systems parasitic loads will be measured with a dedicated power meter **(WP)** in the 208 V panel located on the back side of the pillar the CDH enclosure is mounted. The total facility power will also be monitored by a third power meter (**WT**), located up a level in the basement electrical room. Natural gas to the system **(FG)** is measured on the pipe directly in line with the cogen unit. The meter is located outside on the side of the building.

Sensor Details

- ***BTU Meter.*** Badger Series 380 BTU Meter
- ***Temperature***. Two (2) RTD's and one (1) 10K Type II Thermistor
- ***Water Flow***. Badger Series 380 BTU Meter
- ***Gas Flow***. Utility Gas Meter
- ***Power***
    - *Gross Generator* – Veris H8035-0300 Power Meter
    - *Parasitic* – Veris H8035-0100 Power Meter
    - *Total Facility* – Veris E50 Power Meter

Data Logging System

CDH Energy will provide, install, and wire an Obvius AcquiSuite data logger. All field sensors will be terminated to the AcquiSuite. The AcquiSuite will utilize a port on a router or switch (DHCP or Static IP, to be provided by Aegis) to send data nightly to the CDH server. 110 VAC power and CAT 5 cable to be provided to the data logger enclosure by Aegis.

3. Data Analysis

Heat Recovery Rates

The heat recovery rates will be calculated using the 1-minute average data from the logger.

QU – Useful Heat Recovery $$QU_{avg} = k \cdot \frac{1}{N} \sum_{j=1}^{N} FHW \cdot (THW1_j - THW2_j)$$

QR – Rejected Heat Recovery $$QR_{avg} = k \cdot \frac{1}{N} \sum_{j=1}^{N} FHW \cdot (THW2_j - THW3_j)$$

Where N = 15 when converting from 1-minute to 15-minute data. K is the product of density and specific heat. The loop fluid is expected to be water or water with some glycol. For instance the factor *k* is equal to:

30% glycol: k_{gly} = 466.6 Btu/h·gpm·°F at 180ºF
pure water: k_{water} = 487.8 Btu/h·gpm·°F at 180ºF

Other Calculated Quantities

Net generator power will be calculated by subtracting the measured parasitic power from the gross generator output.

WNET = WG - WP

The fraction of parasitic losses (which is typically 3-5%) is defined as

$$f_{para} = \frac{WP}{WG}$$

The net total efficiency of the CHP system, based on the higher heating value of the fuel, will be defined as:

$$TE_{net} = \frac{QU \cdot \Delta t + 3.412 \cdot (WNET)}{HHV_{gas} \cdot FG}$$

where:
- QU_{avg} - Useful heat recovery (MBtu/h)
- WNET - Net Generator output (kWh)
- FG - Generator gas consumption (Std CF)
- Δt - 0.25 hour for 15-minute data
- HHV_{gas} - Higher heating value for natural gas (1.032 MBtu per CF [1])

The total efficiency (TE) can be calculated for any time interval. Other efficiency metrics are also of interest.

Table 2 below summarizes the other efficiency metrics that will be determined:

Table 2. Summary of Efficiency Calculations

	NET (using net power)	**GROSS (using generator output)**
Electrical Efficiency (EE)	$\frac{3.412 \cdot (WNET)}{HHV_{gas} \cdot FG}$	$\frac{3.412 \cdot (WG)}{HHV_{gas} \cdot FG}$
Thermal Efficiency (THE)	$\frac{QU \cdot \Delta t}{HHV_{gas} \cdot FG}$	
Total Efficiency (TE)	$\frac{QU \cdot \Delta t + 3.412 \cdot (WNET)}{HHV_{gas} \cdot FG}$	$\frac{QU \cdot \Delta t + 3.412 \cdot (WG)}{HHV_{gas} \cdot FG}$
Unit Efficiency (UE)	$\frac{(QU + QR) \cdot \Delta t + 3.412 \cdot (WNET)}{HHV_{gas} \cdot FG}$	$\frac{(QU + QR) \cdot \Delta t + 3.412 \cdot (WG)}{HHV_{gas} \cdot FG}$

Notes: 1) All values must be over same time interval.

2) The difference between net and gross efficiency can also be related by a factor of: $1-f_{para}$

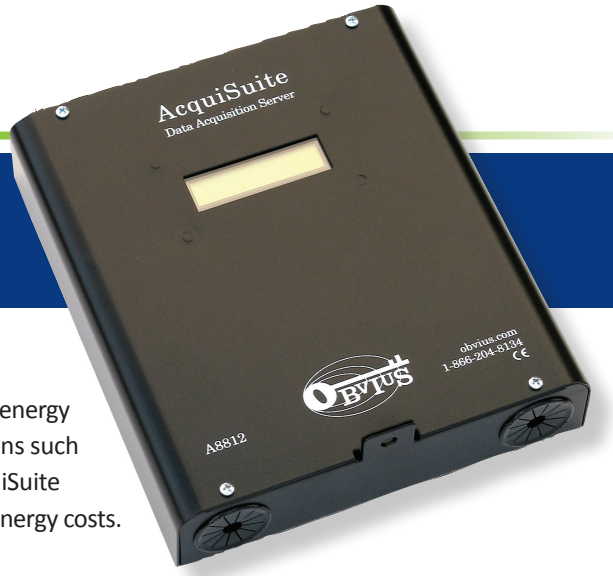
Energy Information Made Obvius

AcquiSuite

Data Acquisition Server



ACQUISUITE A8812-1 AND A8812-GSM

Obvius' AcquiSuite is an intelligent, flexible data acquisition server allowing users to collect energy data from meters and environmental sensors. Designed to connect to IP-based applications such as enterprise energy management, demand response and smart grid programs, the AcquiSuite server lets you connect thousands of energy points, benchmark energy usage and reduce energy costs.

DATA COLLECTION

The AcquiSuite collects and logs data from connected (wired or wireless) devices based on user selected intervals. Data from downstream devices is time stamped and stored locally in non-volatile memory until the next scheduled upload or manual download. Using an integrated modem or Ethernet (LAN) connection you can push or pull data via HTTP, XML, FTP or any custom protocol utilizing our AcquiSuite Module to build your own application, including integrated cellular communication options.

INSTALLATION & FEATURES

No software is required. Easily access information through ANY web browser. The AcquiSuite has eight integrated flex I/O inputs. Each field selectable input can measure resistive, analog (4/20mA / 0-10V) and standard pulse / KYZ pulse output devices. This simplifies installation for basic projects monitoring electric, gas or water meters. There are several additional features including alarming, SNMP Traps, network configuration, wireless diagnostics, security provisions, alarm relays and backlit LCD. Our integrated meter driver library is designed to speed up installation and lower integration costs through "plug-and-play" connectivity.

COMPATIBILITY

The AcquiSuite is compatible with nearly any front-end software platform allowing customers to use a variety of reporting tools; whether it's a local server or an enterprise wide reporting suite. Obvius offers a free utility for automated .CSV file downloads or an affordable hosted solution for $195.00 annually (unlimited data storage).

PARTNERS

Obvius' outstanding integration and software partners supplement our products and services to ensure you receive the very best energy monitoring solution.

APPLICATIONS

- Utility submetering (electricity, gas, water, etc.)
- Measurement and verification (M&V)
- Reduce energy costs
- Access energy information from local or remote sites
- Benchmark building energy usage
- View "real time" performance data
- Track energy use and peak demand for Demand Response programs
- Monitor performance of critical systems (lighting, HVAC, PDUs, inverters, etc.)
- Alarm notification for data points above or below target levels (including SNMP Traps)
- Monitor renewable energy performance and production
- Create load profiles for energy purchases
- Push or pull meter data to energy dashboards, kiosks and software applications
- LEED / Energy Star certification

ABOUT OBVIUS

Obvius manufactures data acquisition and wireless connectivity products specifically for energy management. We deliver cost-effective, reliable hardware designed to speed up installation. Our products are based on an open architecture allowing our customers to collect and log energy information from virtually any meter or sensor. The ability to support multiple communication options provides remote access to all your energy information. Founded in 2003, Obvius is located in Tualatin, Oregon. We serve a global clientele and continue to drive innovation by simplifying data collection.

AcquiSuite A8812

Obvius helps customers collect and distribute energy information. Users can begin with one best-of-breed product that satisfies a requirement, or incorporate several products and services for a complete energy management solution.

Specifications	
Processor	ARM9 embedded CPU, ARM7 IO co-processor
Operating System	Linux 2.6
Memory	32 MB RAM
Flash ROM	16 MB NOR Flash (expandable with USB memory device)
Interval Recording	1 to 60 minutes, user selectable
LEDs	8x input, 4 modem activity, Modbus TX/RX, power, system, IO status
Console	2 x 16 LCD character, two push buttons
Power	
North America	110-120VAC, 60Hz, primary
CE/Europe	100-240VAC, 50-60Hz, primary (interchangeable plug adapters optional)
Power Supply	24VDC, 1A, class 2 wall brick transformer included
Communication	
Protocols	Modbus/RTU, Modbus/TCP, TCP/IP, PPP, HTTP/HTML, FTP, NTP, XML, SNMP-Trap
LAN	RJ45 10/100 Ethernet, full half duplex, auto polarity
Modem	V.34 bis, 33,600 bps (A8812-1 only)
Cellular	GSM/GPRS Cellular (A8812-GSM only)
USB	USB expansion port
Inputs	
Serial Port	RS-485 Modbus, supports up to 32 external devices (expandable)
I/O	8x Flex IO inputs with user selectable modes: voltage, current, resistance, pulse and status
Outputs	
Relays	2x, dry contact 30 VDC, 150 mA max
Physical	
Weight	5lbs (2.3kg)
Size	8" x 9.25" x 2.5" (203mm x 235mm x 64mm)
Environment	
North America	0 to 50C, 0-90% RH, non-condensing
CE/Europe	5 to 40C, 0-90% RH, non-condensing

Power Monitoring Single-circuit

Enercept® Networked Power Transducers (Modbus® RTU)

H8035 & H8036 Series

H8035/H8036

BACnet Connectivity Via New E8951 Gateway

U.S. Patent No. 6,373,238

SPECIFICATIONS

5 Year Warranty

Agency Approvals	UL508
INPUTS	
Voltage Input	208 to 480VAC, 50/60 Hz RMS [1, 2, 3]
Current Input	Up to 2400A continuous per phase [2, 3]
ACCURACY	
System Accuracy	±1% of reading from 10% to 100% of the rated current of the CTs, accomplished by matching the CTs with electronics & calibrating them as a system
OUTPUTS	
Type	Modbus RTU [4, 5]
Baud Rate	9600, 8N1 format
Connection	RS-485, 2-wire + shield
ENVIRONMENTAL	
Operating Temp Range	0° to 60°C (32° F to 140°F), 50°C (122°F) for 2400A
Humidity Range	0 - 95% noncondensing; indoor use only

Approved for California CSI Solar applications (check the CSI website for model numbers).

1. Do not install on the line or load side of a VFD unit, or on any other equipment generating harmonics. For line side applications, use the E5x Series meters.

2. Contact factory to interface for voltages above 480VAC or current above 2400 Amps.

3. Do not apply 600V Class current transformers to circuits having a phase-to-phase voltage greater than 600V, unless adequate additional insulation is applied between the primary conductor and the current transformers. Veris assumes no responsibility for damage of equipment or personal injury caused by products operated on circuits above their published ratings.

4. Detailed protocol specifications are available at: http://www.veris.com/modbus

5. Modbus TCP, BACnet MS/TP, BACnet IP and LON TP/FT-10 protocols available via accessories.

Integral Monitoring Solution Eliminates the Need for Separate Enclosures

FEATURES

- *Revenue Grade measurements*
- *Precision electronics and current transformers in a single package...reduces the number of installed components... creating significant labor savings*
- *Monitor energy parameters (kW, kWh, kVAR, PF, Amps, Volts) at up to 63 locations on a single RS-485 network...greatly reduces wiring time and cost*
- *Fast split-core installation virtually eliminates the need to remove conductors...saves time and labor*
- *Smart electronics virtually eliminate CT orientation concerns...fast trouble-free installation*
- *CSI approved...eases submission process for California Solar Initiative*

APPLICATIONS

- *Energy managment and performance contracting*
- *Monitoring for commercial tenants*
- *Activity-based costing in commercial and industrial facilities*
- *Real-time power monitoring*
- *Load shedding*

DESCRIPTION

The **Enercept H8035 and H8036 Series** are innovative three-phase networked (Modbus RTU) power transducers that combine measurement electronics and high accuracy industrial grade CTs in a single package. The need for external electrical enclosures is eliminated, greatly reducing installation time and cost.

There are two application-specific platforms to choose from. The Basic Enercept energy transducers (H8035) are ideal for applications where only kW and kWh are required. The Enercept Enhanced power transducers (H8036) output 26 variables including kW, kWh, volts, amps, and power factor, making them ideal for monitoring and diagnostics.

Color-coordination between voltage leads and CTs makes phase matching easy. Additionally, the Enercept automatically detects and compensates for phase reversal, virtually eliminating the concern of CT load orientation. Up to 63 Enercepts can be daisy-chained on a single RS-485 network.

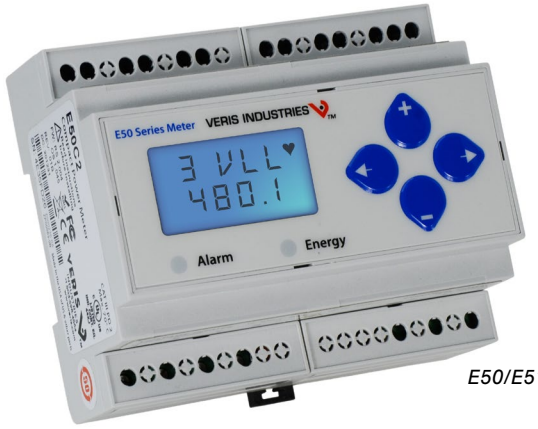
Enhanced Power and Energy Meter

E5x Series



E50/E51

Versatile Energy Monitoring Solution

FEATURES

- *Revenue Grade measurements*
- *High reliability with ANSI C12.20 0.2% accuracy, IEC 62053-22 Class 0.2S on E5xxx*
- *DIN rail or screw mounting options...easy installation*
- *Real energy output and phase loss alarm output on E50Bx and E5xCx models...one device serves multiple applications*
- *90-600VAC...application versatility with fewer models to stock*
- *Data logging capability (E5xC3 and E5xx5)... ensures long term data retrieval and safeguards during power failures*
- *Compatible with CTs from 5A to 32000A...wide range of service types*
- *User-enabled password protection...protect from tampering*
- *System integration via Modbus (E5xCx), BACnet MS/TP (E5xHx), or Lonmark-certified LON FT (E50Fx)...convenient compatibility with existing systems*
- *Native BACnet MS/TP support (no gateway) with serial rates up to 115.2 kbaud (E5xHx)*
- *BTL-certified (E5xH2)*
- *E51 models: Bi-directional metering (4-quadrant), an essential solution for solar and other renewable energy applications, measures Import, Export and net energy transfer*
- *CSI approved...eases submission process for California Solar Initiative*
- *E51Cx includes SunSpec compliant common and meter register blocks*

APPLICATIONS

- *Energy monitoring in building automation systems*
- *Renewable energy*
- *Energy management*
- *Commercial submetering*
- *Industrial monitoring*
- *Cost allocation*

Storage Temp Range	-40° to 85°C (-40° to 185°F)
Humidity Range	<95% RH noncondensing; indoor use only

**10kΩ VAC/DC to 4-10VDC*
***30VAC/DC, 100mA max. (AC: 50/60Hz)*

DESCRIPTION

The **E5x Series** DIN Rail Meter combines exceptional performance and easy installation to deliver a cost-effective solution for power monitoring applications. The E5x can be installed on standard DIN rail or surface mounted as needed. The Modbus, LON, and BACnet output models offer added flexibility for system integration. The data logging capability (E5xC3 and E5xx5) protects data in the event of a communications or power failure elsewhere in the system. Combinations of serial communication, pulse output, and phase alarms are provided to suit a wide variety of applications. Additional pulse inputs on E5xHx and E50Fx provide an easy way to incorporate simple flow sensors to track gas, water, steam, or other energy forms using a BACnet or LON system.

The E51 models add a bi-directional monitoring feature designed expressly for renewable energy applications, allowing measurement of power imported from the utility grid as well as power exported from the renewable energy source (e.g. solar panels). In this way, a facility administrator can track all energy data, ensuring accuracy in billing and crediting. They are also useful for monitoring loads that use regenerative braking.

Badger Meter

Series 380 Impeller

380CS/HS

OVERVIEW

The Badger Meter Series 380 Btu Systems provide a low cost system for metering cold or hot systems. The 380CS/HS can accurately measure flow and temperature differential to compute energy. Utilizing either BACnet or Modbus RS-485 communications protocols or a scaled pulse output, the Btu Meter can interface with many existing control systems.

The rugged design incorporates an impeller flow sensor and two temperature probes. One temperature probe is conveniently mounted directly in the flow sensor tee. The second temperature probe is placed on either the supply or the return line depending on ease of installation for the application. These minimal connections help simplify installation and save time.

The main advantage of the Series 380 Btu meters is the cost savings over other systems offered on the market today. The integration of flow and temperature sensors provide a single solution for metering. With this system it will be possible to meter energy where it hasn't been cost effective before.

Commissioning of this meter can be completed in the field via a computer connection. Setup includes energy measurement units, measurement method, communication protocol, pulse output control, fluid density, and specific heat parameters.

RS-485 Configuration

All Series 380 Btu meters are equipped with BACnet and Modbus protocols as a standard feature. The protocol of choice can be selected and setup in the field at the users discretion. These common protocols allow for quick and easy commissioning while gaining valuable application data beyond energy total. Information such as Flow Rate, Flow Total, Energy Rate, Energy Total, Temp 1, Temp 2, and Delta T can all be transmitted on the RS-485 connection.

Scaled Pulse Output

If the RS-485 is not required for the application, a simple scaled pulse output is available. This output would represent energy total and can be set in various units of measure. This output is an open drain scaled pulse output that is compatible with a variety of PLCs, counters and also the Badger Meter 350 wireless system. This ensures the unit is easily compatible with most inputs.

MECHANICAL

Mass — Less than 13 lbs.

ELECTRICAL

Inputs

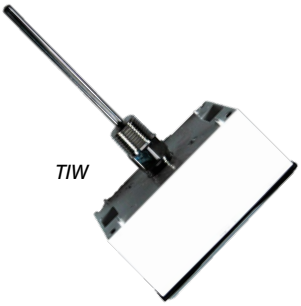
Immersion Temperature Sensors

TI Series



TIW

TID

TIH

TIG

NEW! 4-20mA Option

Corrosion Resistant Stainless Steel Probe

FEATURES

- *Cost-effective high accuracy thermistors/RTDs*
- *Corrosion resistant stainless steel probe design...durable*
- *1/2" NPT threads standard...ease of selection*
- *Variety of enclosures include duct mount, service entry body, threaded, and water resistant to fit your application*
- *Thermowells available...enables easy servicing*

DESCRIPTION

These immersion probe type temperature sensors are both highly accurate and cost effective. Installation could not be easier. The sensor is encased in a corrosion-resistant stainless steel probe for durability, with a choice of service entry body, indoor junction box, or threaded enclosures. A variety of RTD or thermistor sensor options and probe lengths are available for maximum application versatility.

APPLICATIONS

- *Tanks*
- *Pipes*
- *Chillers*

To compute Linitemp temperature:
mV reading/10 - 273.15 = Temperature in °C

SPECIFICATIONS

5 Year Warranty

Wiring	22 AWG; 2-wire: RTD/Thermistor; 3-wire: Linitemp
Probe	Stainless Steel
Test Pressure	200 psi
Operating Temp	-25° to 105°C (-13° to 221°F)
TEMPERATURE TRANSMITTER OPTION	
Input Power	4-20mA models: Loop powered Class 2, 12-30VDC only, 30mA max; 0-5/0-10V models: Class 2, 12-30VDC/24VAC, 50/60Hz, 15mA max
Temp Output	2-wire, loop powered 4-20mA
Sensor Type	Thermistor/RTD
Transmitter Accuracy	±.1°C*
Ranges	-25° to 105°C (available ranges; model number specifies exact range)
LINITEMP OPTION	
Input Power	Class 2; 5 to 30VDC
Output	10mV/°C
Operating Temp	-25° to 105°C (-13° to 221°F)
Calibration Error	1.5°C (2.7°F) typical; 2.5°C (4.5°F) max. at 25°C (77°F)**
Error over Temp	1.8°C (3.24°F) typical; 3.0°C (5.4°F) max. over 0° to 70°C (32° to 158°F) range; 2.0°C (3.6°F) typical, 3.5°C (6.3°F) max. over -25° to 105°C (-13° to 221°F) range

** Add the transmitter accuracy to the RTD/thermistor accuracy to get the total product accuracy. For RTD and thermistor accuracies and ranges, see the table below.*

4-20mA Temp. Transmitter Option†

Bottom Range Temp.††	Temp Scale	Top Range Temp.‡
= (choose a valid temp value)	**C** = Celsius **F** = Farenheit	= (choose a valid temp value)

Thermowell Sizing

Probe Length	Thermowell Length
A (2 1/2") (64mm)	**1 1/2"** (38mm)
B (4") (102mm)	**3"** (76mm)
C (6") (152mm)	**5"** (127mm)
D (8") (203mm)	**7"** (178mm)
E (12") (305mm)	**11"** (279mm)

† Available only with TID and TIW enclosures using B, C, D, H, W, and Y sensors. For 4-20mA temperature transmitter on TIG and TIH, a separate AA10xxxx must be ordered.

†† Value must be a whole number between -25°C and 105°C (-13°F and 221°F) and must be lower than the Top Range Value.

‡ Value must be a whole number between -25°C and 105°C (-13°F and 221°F) and must be higher than the Bottom Range Value.

Example:

TI	W	D	E	H	-10	C	50	O

ACCESSORIES

Thermowells (AA22, AA24, AA25, AA33)
Temperature range converter, resistive to 4-20mA (AA10xxxx)

AA24

AA10xxxx

- CDH was on site to install data logger, terminate sensor wiring, and verify metering on March 30, 2015.

CDH To Do –

1. Terminate / configure power readings from Beckwith protective relay
2. Terminate gas meter (once pulse output is added)

Summary

Aegis provided and installed the power, gas and BTU meter. CDH provided the data logger and one temperature sensor. An electrician did the majority of the wire pulls while CDH terminated wiring and verified metering.

Monitored Data Points

No.	Input	Data Point	Description	Units	Sensor
1	MB-002	WT	Total Facility Power	kW/kWh	Veris E50 C2 with MV Rope CTs
2	MB-001	WG	Gross Generator Power	kW/kWh	Veris H8035-0300-3
3	MB-003	WPAR	Parasitic Power	kW/kWh	Veris H8035-0100-2
4	IN1	FG	Generator Gas Use	CF	Utility pulse output from billing meter
5	IN2	THW1	Supply Temperature from Cogen Unit	deg F	Veris TID B1 D0 10k Type II thermisor

Secondary DNS:	207.172.3.9

Procedure

- Power (generator and parasitic) was verified by comparing the Veris H8035 power meter reading on the Obvius to the measured power using a handheld Fluke-39.

- Temperatures were measured using a Fluke 51-II and a surface probe.
  - All temperatures were measured from the surface of the copper piping.

- Hot water loop flows were verified by comparing the Badger 380 BTU meter flow measurement to the flow measured by the Portaflow ultrasonic flowmeter.

Verification Data – March 30, 2015

Generator Power:

WG	Obvius (kW)	Cogen Display (kW)
	30	29

Parasitic Loads:

WPAR	Obvius (kW)	Fluke (kW)
	1.95	2.01

Temperatures:

	Obvius (°F)	Gauge (°F)	Fluke (°F)
THW1	176.2	176	172
THW2	175.9	177	173.8
THW3	176.7	179	179.5

Flow:

FHW	Obvius (gpm)	Portaflow (gpm)
	24.4	24.1
	23	22.8
Avg:	*23.7*	*23.5*
